Poor Ho went to sleep in Tsiang's back yard, and very mournful washe. Suddenly a great bundle of clothes was thrown out of a win-low. Thinking there were thieves in the house, and not being, in a mood to protect the farmer's household, he put the bundle on his back and trudged down the road with it. Soon he heard steps behind him. The inturiated farmer? Not so. It was only a pretty girl. She joined him and walked by his side without saying a word or looking at him. On they went through the dark night, mile upon mile, and just as the day was breaking they reached the vil-lage inn. Then she looked at him and shricked. It was not the young consin who had wood her to pack up her clothes and meet him at midnight. It was only poor, lazy Ho. "Well, well," she said; "there is no help for it. The sportsmen on board, who were fast asleep, were quickly aroused and gave chose in a boat. After rowing several miles up the fiord against a strong ebl-tide the party described the bears sented on a strip of land—an old mother with her two cubs. They did not observe the beat until it was within five hundred yards of them; the mother then stood on her hind legto reconnoiter, and at once turned tail and ran off at full speed with her young ones after her. The Planet Saturn.

An examination of the planet satura the Dearborn observatory, with a rather high magnifying power, resulted n the witnessing of a very interesting and somewhat rare phenomenon. On the western limb of the planet, in lati-tude 40° to 45° north from his equator, here was an enormous protrusion, o onlying out, from the generally elliptic outline, and a corresponding one, though not so large, on the northern hemispher was very easily noted, even by an unpracticed eye, when compared with the ontour of the southern half of the

The phenomenon is described in the books as "the square-shouldered aspect" of Saturn. It appears to have been first neticed by Herschel in the early part of the present century; but that eminent astronomer was so much puzzled by i as almost to doubt the evidence of hi own senses. But it has been observed on several occasions during the las seventy years; and astronomers or some of them, now think they know what is means.

Such a change of form would be im possible without a general disruption, is what we see of the planet were a solid crust like that of the earth. But we have very good reason to believe that we see only his atmosphere—very much Comparing his volume (700) with his power to disturb the other badies of the ystem (92.4), that of the earth being unity in each case, we find that his aver age density is only about one eighth part that of the earth, or three-fourths the density of water. The difficulty of coneiving how a solid body so vast in size could be composed of such light naterial vanishes if we suppose that the planet itself is very much smaller than the disc we see, and is surrounded by a very deep atmosphere. This is the view now gen erally adopted by those astronomers who reason on the subject; and it turnishes a ufficient explanation of the phenomenes known as the square shouldered aspect. We do not find it necessary to believe that these occasional changes in the shape of Saturn, great enough to be visible at mostly in the state of the stat
